

Electrical Adapter

ABSTRACT

5 An electrical adapter includes a base having conducting
pins extending from one side for insertion into apertures
of a mating socket, electrical terminals on the other side
and electrically connected to each of the conducting pins.
The base a bayonet fitting. A body for connection to the
10 base has a corresponding bayonet fitting for co-operating
with the bayonet fitting of the base to secure the body to
the base in a desired orientation. There are electrical
contacts configured on the body to engage with the
terminals of the base when the body and base are secured
15 to one another. A power cord extends from the body.
